Drum Crusher Model# DC8000-20 Diesel

The Model DC 8000 is for use in multiple or remote location where the electrical supply is limited or unavailable. The trailer and machine weigh 5,000 pounds and is capable of being pulled by a standard pick up truck with a Class 3 hitch. The trailer is supplied with electrical brakes. The power for the crushing mechanism comes from a 20 HP cast iron diesel engine. The engine runs at 3600 rpm. The machine develops 85,000 pounds (38,555 Kg) of force and will crush a standard 55 gallon steel drum down to 3 inches. It is designed for heavy-duty continuous use.

Standard Features:

- 20 hp Diesel motor
- Compaction force up to 85,000 pounds at 3000 psi
- Crush 55 gallon steel drum down to 2.5"
- Cycle time of 25 seconds
- 40 gallon hydraulic tank
- Heavy Duty Steel construction
- Directional Control Valve
- Drum ring locator, keep the drum aligned
- Safety interlocks door, prevent operation while door is open
- Mounted on a trailer
- 12 Volt Battery (Included)
- Safety features to comply with OSHA

Additional Options:

Chamber for 85 gallon drum	Chamber enlarged for crushing 85 gallon drum
Dutch Door	This is a door that can open from the top and remain closed on the bottom for packing purposes
Fluid collection reservoir 30 gal	Under the crushing chamber to collect any fluids inadvertently not removed prior to crushing the drum
Vent Fan	Heavy-duty Vents Fan. Custom & Std. sizes available
Hepa Filter	This type of air filter can remove at least 99.97% of airborne particles 0.3 micrometers (µm) in diameter.
Galvanized Finish	Protective coating of zinc to provide corrosion resistance
